

Amendment to the Specification

Replace the paragraph starting on page 7, line 31, with the following paragraph:

AI - When using the mobile communication operation mode, a user may recall phone numbers from the ~~device's~~ 10 memory of the device 10. However, if the number is not available, the user may input the phone number by accessing an on-screen keypad in the second display panel 13. In so doing, the second display panel 13 is powered. The number inputted is shown in the second display panel 13 and also displayed in the first display panel 12. In this respect, the second display panel 13 is able to display cross-operation information in a manner defined by a manufacturer, while not compromising the phone personality. Alternatively, the user may access a keypad of the keyboard that may be connected to the device. -
